**Part 2b. Description of Role with Payment Cards (ROC Section 2.1)**

|   |   |
|---|---|
| Describe how the business stores, processes, and/or transmits account data. | <p>Parlevel provides unattended retail technology to food and beverage operators. These solutions are mainly a cloud based software and self-attended kiosks (points of sale). Both of these inter-operate with payment solutions, since consumers pay at vending machines that Parlevel is monitoring or at kiosks in which Parlevel is the point of sale software. The following are explanations on the three different ways in which payment solutions inter-operate with Parlevel, and the very limited role Parlevel plays in each.</p> <p>At vending machines, smart coolers, and Parlevel kiosks fitted with a semi-integrated payment solution, the operator places a card reader in contact with such</p> |
|---|---|

|   |  |
|---|--|
|   | <p>machine for customers to complete card present payments using swipe, chip insert or through Near-field Communication Contactless Payment (NFC). Full track or EVM data is encrypted upon contact utilizing a secure E2EE (End-to-End Encrypted) direct real-time connection to the card processor. All data is encrypted by the card reader upon contact and such solution connects via a direct mobile data or internet connection to its gateway. Parlevel does not have access to the encryption keys, cannot decrypt this encrypted cardholder data, and is not in the flow of information, which happens directly between the reader and its gateway. This dramatically reduces the scope as Parlevel does not store, process and/or transmit anything.</p> <p>Some Parlevel kiosks utilize a secure E2EE (End-to-End Encrypted) direct real-time connection to the card processor when items are checked out. The customer will complete card present payment through swipe or through Near-field Communication Contactless Payment (NFC), with no cardholder data stored for later use. Transactions are needed to complete purchase of items from the self-service, stand-alone, kiosks and mini-retail shops where Parlevel provide their services. All data is encrypted by the card reader upon contact, Parlevel does not have access to the encryption keys and cannot decrypt this encrypted cardholder data. This dramatically reduces the scope as Parlevel does not store, processes and/or transmit (PAN data encrypted during transmission, but Parlevel does not have access to keys – hence not in scope).</p> <p>Parlevel koin mobile app is an e-commerce application that utilizes Stripe PCI DSS certified backend solution for e-commerce transactions. It uses Stripe's drop-in code for card data to be entered, cards to be stored on file at Stripe and where Parlevel uses tokens to charge such cards on file when customer transacts. Parlevel stays out of scope given it never receives, stores, transmits, or uses cardholder data.</p> |
| <p>Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.</p> | <p>Entity is not exposed to clear-text CHD. All CHD is collected by the POI device deployed within the kiosk and encrypted by the POI device. This information is sent directly to the processor for payment processing. Upon completion of processing the truncated PAN is provided to the Parlevel backend environment along with results of the transaction request.</p>  |
| <p>Describe system components that could impact the security of account data.</p>   | <p>Kiosks and servers supporting the solution.</p>   |

| <b>Part 2c. Description of Payment Card Environment</b>   |   |
|---|---|
| <p>Provide a high-level description of the environment covered by this Assessment.</p> <p><i>For example:</i></p> | <p>Assessment addressed all system components within the CDE to include database servers, application servers, and web servers.</p> |

|  |  |
|--|--|
| <ul style="list-style-type: none"> <li>• <i>Connections into and out of the cardholder data environment (CDE).</i></li> <li>• <i>Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.</i></li> <li>• <i>System components that could impact the security of account data.</i></li> </ul> | <p>Assessment covered connection to payment processors and development of the software used by entity in delivery of their services. Assessment also assessed implemented policies and procedures governing security and PCI DSS compliance.</p> |
|--|--|

|  |   |
|--|---|
| <p>Indicate whether the environment includes segmentation to reduce the scope of the Assessment.<br/>(Refer to the "Segmentation" section of PCI DSS for guidance on segmentation)</p> | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

## Section 3 Validation and Attestation Details

### Part 3. PCI DSS Validation (ROC Section 1.7)

This AOC is based on results noted in the ROC dated *(Date of Report as noted in the ROC 2024-02-07)*.

Indicate below whether a full or partial PCI DSS assessment was completed:

- Full Assessment** – All requirements have been assessed and therefore no requirements were marked as Not Tested in the ROC.
- Partial Assessment** – One or more requirements have not been assessed and were therefore marked as Not Tested in the ROC. Any requirement not assessed is noted as Not Tested in Part 2g above.

Based on the results documented in the ROC noted above, each signatory identified in any of Parts 3b-3d, as applicable, assert(s) the following compliance status for the entity identified in Part 2 of this document *(select one)*:

| <input checked="" type="checkbox"/> | <p><b>Compliant:</b> All sections of the PCI DSS ROC are complete, and all assessed requirements are marked as being either In Place or Not Applicable, resulting in an overall <b>COMPLIANT</b> rating; thereby Parlevel Systems has demonstrated compliance with all PCI DSS requirements except those noted as Not Tested above.</p>   |                      |   |  |  |  |  |
