Provide a brief explanation why any checked services were not included in the Assessment:

Part 2b. Description of Role with Payment Cards (ROC Sections 2.1 and 3.1)

Describe how the business stores, processes, and/or transmits account data.

Software for management of delivery of catering to workplaces for meetings and events. Some catering transactions are settled online by payment card (and some are invoiced and settled by bank transfer etc). Cardholder data (tokenized) is stored for future transactions either using a pre-authorization, card validation or if the cardholder wishes to store data via the Spoonfed Wallet. For clarity all cardholder data is stored on the card processor's servers and not in Spoonfed.

Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.	Transactions are card not present. The payment card information is entered directly into the payment processor's servers, where the processing takes place, with a token return to the Spoonfed platform. Card details saved online by the Cardholder may be used in the Back of House (via token) to collect payment for a transaction. This may be a 'one off' transaction or the cardholder may have saved data for future transactions.
Describe system components that could impact the security of account data.	Servers supporting the solution.

Part 2. Executive Summary *(continued)*

Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.*
- *System components that could impact the security of account data.*

Assessment reviewed the overall environment to include the network deployed at the co-location facility, access by entity to the facility from the office locations, and connectivity to and from supported processors. In addition, the development and management of systems and the internal applications were reviewed.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.

(Refer to the "Segmentation" section of PCI DSS for guidance on segmentation)

☒ Yes ☐ No

Part 2d. In-Scope Locations/Facilities (ROC Section 4.6)

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers and mail rooms) in scope for this Assessment.
