

Charging an iPad Mini

Plug the power source into the iPad mini in the case.

- If a green light goes on, the MSR & iPad mini are being charged. Nothing further is needed, every night plug this iPad mini into the power source.

- If a green light **does not go** on, carefully open the iPad mini case. Lift the iPad & MSR out of the case.

- Take the dongle off and plug the power source directly into the MSR.

Secure. Scalable. Reliable.

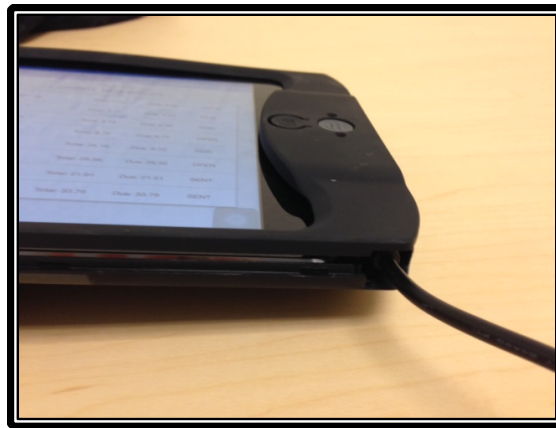

Charging an iPad Mini

- If the green light goes on, then the problem is the dongle.

Each night, pop the corner of the iPad case open and insert the power cord into the MSR. Note, the power cord needs to have the smaller side up to plug in correctly. Confirm the green light goes on.

IF you remove the iPad from the case and take the dongle off you can plug in the power source directly to the MSR.

- If a green light does **not go on**, there is a problem with the MSR, please contact ReadyTouch support immediately.
