

# FUJITSU F-53

## OEM Training

### Overview

The Fujitsu OEM Training Classes are designed to be introductory lessons to the F-53 Fujitsu cash dispensers. Topics we cover are mechanism components and repair, operations, media specifications, and diagnostics approach. There is a special section on troubleshooting designed to minimize your time diagnosing/repairing issues in the field.

### Goals

The intention of this training is to ensure that attendees understand the operations and required procedures to install and maintain the Fujitsu F-53 dispenser. Attendees should be able to:

- Basic setup and Installation
- Explain the basic operation of the BDU
- Diagnose errors (phone, on-site)
- Diagnostic testing with approved software

### Materials

Attendees will be given all information covered in class on CD-ROM.

1. PDF files of product manuals, guides, quick sheets
2. Diagnostic software programs (TestPoint)
3. Parts Catalogs for part identification and ordering.

### Evaluation

At the conclusion of the training class, there will be a brief lab exercise.

The lab will focus on error resolution, diagnostics, and parts replacement. Attendees will be required to resolve error situations, explain corrective actions, and perform part replacements.

### Requirements

All training materials will be provided prior to class.

Attendees are responsible for:

- Laptop PC (Windows)
- Notebook/Pen

### Topics

---

#### Product Overview

Introduction to the F-53 BDU from Fujitsu. Components, software, and technical specifications.

---

#### Field Service

Error resolution through service diagnostics, and corrective actions.

---
