

Kiosk Status Indicator (V5 / RT) – Operator

ReadyTouch or V5 kiosks now provide the following easy steps to determine if the unit is online.

- Tap **top left icon** five times, to go to the **Admin** screen on the kiosk. A **Status** section will display under the keypad showing the following three options:
 - Online
 - Offline
 - Local
- The status should update every five to ten seconds. When the kiosk status changes, the operator should be able to see the updated status.
