

Release Notes rel-201023-server

The following new features and fixes were deployed on 11/5/20.

ADM

What's new

- On ADM we have added links to the 365 Privacy Policy and Terms of Service so that users can easily access this information on our website. There is now a "Privacy/Terms of Service" link on the Login page of ADM and in the Profile dropdown tab in the upper right corner of ADM when logged in.
- The digital receipt that consumers receive after they complete a purchase has been updated to display the Footer text as entered on ADM. This will ensure that the digital and printed receipts have the same messaging so that operators can effectively communicate with consumers.
- On the Global Products page on ADM, we have updated the Export format to match the Product Upload Template. This update will make it much easier to export and update products since all the associated fields will be included in the file format that will ultimately be uploaded by 365.

Bug Fixes

- We have fixed a bug on the Import Inventory Values feature in ADM that was causing the uploaded values to error out and not update. With this fix, ADM users will once again be able to successfully upload the inventory file and update on-hand inventory quantities.
- A bug on the Account Funding report that was causing the Remaining Account Balance value to be incorrect has been fixed. This value will now match the total of balances as shown on the **Admin > Consumer** tab for each individual location.
