

365Dining: Order Management System

Bringing end-to-end technology solutions to the foodservice industry

365 Order Management System

The 365 order management system seamlessly connects your front and back-of-house operations, increasing staff productivity and ensuring order accuracy for the consumer.

Kitchen Display System (KDS)

The KDS is a touchscreen monitor that will be stationed in your kitchen prep zones. The system can be scaled to support multiple stations across your dining facility.

All orders placed through 365Dining solutions are automatically sent to the KDS, allowing operators to prioritize orders based on cook time, accurately track fulfillment times, streamline prep and cook processes, enhance back-of-house workflows and improve kitchen efficiency.

Now Serving Screen

Integrated with KDS, the Now Serving screens will provide patrons with real-time visibility on order status through a consumer-facing display monitor, indicating when their order is being prepared and when it is ready for pickup. This provides a more transparent customer journey and improves thru-put in your dining space.

Reinvent your foodservice operation.
