

# Installation requirements

20 oktober 1999

## Needs on location to install a Coffee machine

A table or basecabinet to install the machine on (the surface must be stable). Dimensions are depending on the machine type, please check your machine specific technical manual for the exact dimensions:

Never place the machine too tight to a wall.

### Electric

Mains supply: 230VAC  
 Capacity: 3 KW max.  
 Plug: 16A with grounding  
 The length of the power cord on the machine is: 2 meter  
 (do not use and extension lead)

### Water

Connection: 3/4" BSP  
 Pressure: 0,5 – 6BAR [50kpa – 600kpa]

The length of the water tube (if included) 1,4 meter  
 Between water tap and tube a waterlock needs to be connected.

Further technical information and safety risks and warnings are in your technical manual.  
 De Jong DUKE reserves the right to change or modify specifications with prior notice and obligation on machines purchased.
