

Optimize Your Warehouse

Save time and money with LightSpeed Automation.

Warehouse Order-Picking Solutions

Our warehouse order picking solutions provide you with the tools you need to enhance your warehouse operations and help you get control over one of your biggest expenses: your inventory.

Solutions are fully integrated with VMS, Micro Market and Coffee management systems and feature employee productivity reporting.

Bi-directional communication with the point of sale (kiosk, vending machine, etc.) maintains accurate inventory levels across systems.

FastTrack: Warehouse efficiency made easy

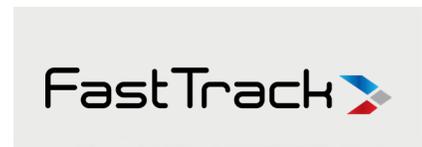

FastTrack is a powerful, yet simple vending pick system that provides a cost effective pick to light solution for vending companies. The system simplifies order fulfillment during the pre-kitting process by using light signals to direct the activities of your warehouse personnel.

Our turnkey installation process can convert any vending operator into a highly efficient facility within days.

Must-have for large operators

Ideal for operators with 8+ routes, this pick-to-light order fulfillment system is essential for large operators.

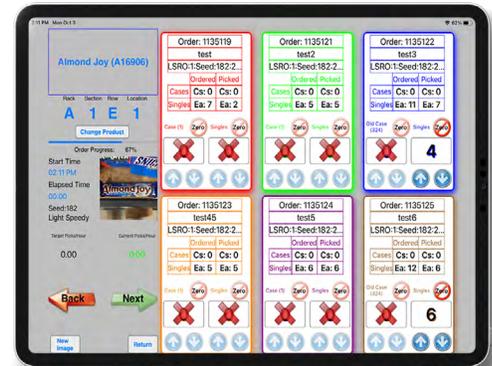

- Most trusted order pick system in convenience services
- Easy-to-use LED light technology to direct pre-kitting activities
- Changes to actual picked quantities made on the line and reported to provider
- Turnkey installation process with training

Xpress mobile picking solution

For smaller warehouse operations, trust the Xpress mobile warehouse solution, utilizing a tablet mounted on any mobile cart or pallet jack.

- Picker is directed through warehouse on an efficient route
- Pick multiple orders at one time
- Product images on screen to assist with accuracy
- Changes to actual picked quantities made on the line are reported to provider
- System forces confirmation of the pick item before displaying next, ensuring focus and accuracy

Advanced Inventory Management

Optimize efficiency with LightSpeed Level

Consolidate information from all your inputs to truly understand your warehouse inventory and purchasing needs.

Inventory Features

- Real-time inventory: See on-hand product quantities at any time
- Increase efficiency: Cut ordering time with suggested purchase quantities
- Maximize warehouse space: Reduce inventory levels by 15%-20%
- Automate receiving: verify products received against Purchase Orders and identify discrepancies immediately
- Optimize purchasing: use sales velocity data and current inventory levels to suggest optimal purchasing

“I can say with great confidence that our efficiency and accuracy are 100% attributed to LightSpeed Automation.”

– Jared Detwiler, One Source
